Issued Monday, November 29, 2021, 3:00 PM

For the Week Ending November 28, 2021

HARVEST WRAPPING UP; HAY BEING FED ON A REGULAR BASIS

In West Tennessee, producers neared completion of harvests with good yields reported. Harvest was delayed very briefly because of rain but wind and sunshine enabled producers to return to fields with little interruption. Insecticide applications for aphids in wheat continued. In Middle Tennessee, some soybeans were unharvested, primarily because of storage shortages. East Tennessee harvest was delayed by rain; however, soybean harvest was expected to wrap up in the next week or so. Pastures are starting to go dormant and hay is being fed on a regular basis. There were 4.8 days suitable for field work, which gave producers an opportunity to make great planting and harvesting progress. Topsoil moisture was 5 percent short, 85 percent adequate, and 10 percent surplus. Subsoil moisture was 8 percent short, 84 percent adequate, and 8 percent surplus.

					CONDITION					
CROP PROGRESS	This Week	Last Week	2020	5 Year Avg.	Item	Very Poor	Poor	Fair	Good	Excellent
	Percent						Percent
